

The warmest, safest natural fibre insulation made in Ireland

Ecocel cellulose fibre insulation

Cellulose Fibre Insulation (CFI) locally sourced from recycled newspapers, manufactured in Ireland out performs Imported High Carbon Glass and Mineral wools.

It has superior:

- Thermal performance
- U-Value per euro spent
- Fire resistance
- Acoustic performance
- Indoor air quality
- Air tightness *
- Lifespan**
- Efficiency of installation

It is the obvious choice for those wanting cost effective and better insulation while keeping their carbon footprint to a minimum.

When we have superior insulation made here in Ireland from recycled material it makes no sense to provide grants for an Imported High Carbon product.

* Tests by Ulster University confirm just installing cellulose in the attic can improve air tightness by up to 9%

**cellulose will last the lifespan of the building without vapour check unlike glass and mineral wools
